

AMENDMENTS TO THE SPECIFICATION

KM
12/18/04
Please amend paragraph [0016]¹⁷ as follows:

[0016]¹⁷ Another problem is that the method of US 6,5754,750 assumes a synchronous invocation chain, which is inappropriate for high-performance On-Line Transaction Processing ("OLTP") applications. With a synchronous invocation the client waits for either a reply or a time-out before continuing. The invoked object in turn may become a client of another object, propagating the synchronous call chain. The result can be an extensive synchronous operation, blocking the client processing and requiring long time-outs to be configured in the originating client.
